

# Getting your Google Tag Manager code

1. Go to <https://tagmanager.google.com/#/home>
2. In the section for your account, look for your container and send us the ID displayed in the 'Container ID' column. Note that you may only have one container. If you have none please create one or give us access so we can do that for you (details for how to do that at the top of this entry).

I hope this guide was helpful for you! If you have any questions, please let us know.
